

Terminal Gaming Setup

Corey Scheinfeld

June 22, 2020

1 Installation

To install the package on your own computer:

1. Download and install the latest version of Java at <https://java.com/en/download/>.
2. Open the Terminal app.
3. Go to https://github.com/corey-scheinfeld/_Games
4. Download Games.zip or, if you have Git installed, clone the project with:

```
git clone https://github.com/corey-scheinfeld/_Games.git
```

5. Change directories to the 'Games' folder.

```
cd \Path\to\folder
```

If you are unsure of the exact path, type 'cd ', drag the folder from your Finder window to the Terminal window, and then hit enter.

2 Playing

Battleship:

1. Start Game by typing the following:

```
javac Battleship.java  
java Battleship
```

2. Finish game by typing control C

ConnectFour:

1. Start Game by typing the following:

```
javac ConnectFour.java  
java ConnectFour
```

2. Finish game by typing control C
