

Terminal Gaming Setup

Corey Scheinfeld

June 23, 2020

1 Installation

To install the package on your own computer:

1. Download and install the latest version of Java at <https://java.com/en/download/>.
2. Go to https://github.com/corey-scheinfeld/_Games
3. Download and open '`_Games-master.zip`' or, if you have Git installed, clone the project with:

```
git clone https://github.com/corey-scheinfeld/_Games.git
```

4. Open the Terminal app.
5. Change directories to the '`Games`' folder.

```
cd \Path\to\folder
```

- '`_Games-master`' is the parent of the '`Games`' project folder if the zip file was downloaded,
- '`_Games`' is the parent if the project was cloned.

If you are unsure of the exact path, type '`cd` ', drag the folder from your Finder window to the Terminal window, and then hit enter.

2 Playing

Battleship:

1. Start Game by typing the following into Terminal:

```
javac Battleship.java
java Battleship
```
2. Finish game by typing control C

ConnectFour:

1. Start Game by typing the following into Terminal:

```
javac ConnectFour.java
java ConnectFour
```
2. Finish game by typing control C
