Terminal Gaming Setup

Corey Scheinfeld

June 22, 2020

1   Installation

To install the package on your own computer:

1. Download and install the latest version of Java at `https://java.com/en/download/`.

2. Open the Terminal app.

3. Go to `https://github.com/corey-scheinfeld/Games`

4. Download Games.zip or, if you have Git installed, clone the project with:

   ```
   git clone https://github.com/corey-scheinfeld/Games.git
   ```

5. Change directories to the 'Games' folder.

   ```
   cd \Path\to\folder
   ```

   If you are unsure of the exact path, type 'cd ', drag the folder from your Finder window to the Terminal window, and then hit enter.

2   Playing

Battleship:

1. Start Game by typing the following:

   ```
   javac Battleship.java
   java Battleship
   ```

2. Finish game by typing control C

ConnectFour:

1. Start Game by typing the following:

   ```
   javac ConnectFour.java
   java ConnectFour
   ```

2. Finish game by typing control C
